

Stop global warming

global warming is making a lot of changes to our planet like

the floods

droughts

temperature changes

storms

floods

we can change the destiny of our planet by doing some things

we can recycle our garbage

we can plant many trees

we can use renewable energies

With everyone's help we can change the world and make it a better place

you can heal our planet with actions that benefit the cleanliness of our waters,
our air, our forests, our planet needs you

we are going to clean

our planet

we are going to

clean our rivers and seas

we are going to

use renewable energy

we are going to

do it together

Let's go.
